

**CS1571**  
**Fall 2019**  
**10/14 In-Class Worksheet**

Name: Simran Gidwani

Where were you sitting in class today: Back Right

**A. Pre-Reflection**

On a scale of 1-5, with 5 being most confident, how well do you think you could execute these learning objectives:

- |   |       |
|---|-------|
| 11.2 Translate English sentences into first order logic         | _____ |
| 12.1 Demonstrate how to make inferences in FOL using resolution | _____ |
| 12.2 Explain what a definite clause is and why it is useful.    | _____ |

**B. Translate English sentences into FOL**

1. Translate the following sentences into FOL:

Every major scale has a relative minor scale

$$\forall x(\text{major}(x) \rightarrow \exists y(\text{minor}(y) \wedge \text{Relative}(x, y))$$

There is something that someone is an expert in.

X= person

Y=areas of expertise

$\exists x, y \text{Person}(x) \wedge \text{Area}(y) \wedge \text{Expert}(x, y)$

Someone at Pitt has learned four languages.

$$\exists x \text{atPitt}(x) \wedge \text{Knows}(\text{four languages})$$

There is no one who possesses wisdom.

$$\sim \exists x \text{ Person}(x) \wedge \text{Wisdom}(x)$$

**C. Demonstrate how to make inferences in FOL using resolution:**

2. Convert the following expression to conjunctive normal form:

*Everyone who loves all animals is loved by somebody.*

$$\forall x (\forall y \text{ Animal}(y) \Rightarrow \text{Loves}(x,y)) \Rightarrow (\exists y \text{ Loves}(y,x))$$

Step 1: Remove the biconditionals and implications.

$$(\forall x \sim (\forall y \sim \text{Animal}(y) \vee \text{Loves}(x,y))) \vee (\exists y \text{ Loves}(y,x))$$

Step 2: Move the negations inward.

$$\forall x (\exists y \text{ Animal}(y) \wedge \sim \text{Loves}(x,y)) \vee (\exists y \text{ Loves}(y,x))$$

Step 3: Standardize variables

$$\forall x (\exists y \text{ Animal}(y) \wedge \sim \text{Loves}(x,y)) \vee (\exists z \text{ Loves}(z,x))$$

Step 4: Skolemize

$$\forall x (\text{Animal}(F(x)) \wedge \sim \text{Loves}(x, F(x))) \vee (\text{Loves}(G(x), x))$$

Step 5: Drop universal quantifiers

$$(\text{Animal}(F(x)) \wedge \sim \text{Loves}(x, F(x))) \vee (\text{Loves}(G(x), x))$$

Step 6: Distribute  $\vee$  over  $\wedge$

$$(\text{Animal}(\text{F}(\text{x})) \vee (\text{Loves}(\text{G}(\text{x}), \text{x}) \wedge \sim \text{Loves}(\text{x}, \text{F}(\text{x}))) \vee (\text{Loves}(\text{G}(\text{x}), \text{x}))$$

#### D. Prove Curiosity Killed the Cat Using Resolution

KB:

$\text{Animal}(\text{F}(\text{x})) \vee \text{Loves}(\text{G}(\text{x}), \text{x})$

$\sim \text{Loves}(\text{x}, \text{F}(\text{x})) \vee \text{Loves}(\text{G}(\text{x}), \text{x})$

$\sim \text{Loves}(\text{y}, \text{x}) \vee \sim \text{Animal}(\text{z}) \vee \sim \text{Kills}(\text{x}, \text{z})$

$\sim \text{Animal}(\text{x}) \vee \text{Loves}(\text{Jack}, \text{x})$

$\text{Kills}(\text{Jack}, \text{Tuna}) \vee \text{Kills}(\text{Curiosity}, \text{Tuna})$

$\text{Cat}(\text{Tuna})$

$\sim \text{Cat}(\text{x}) \vee \text{Animal}(\text{x})$

$\sim \text{Kills}(\text{Curiosity}, \text{Tuna})$  (*this is your negative alpha*)

#### E. Explore Code

Download logic.py from <https://github.com/aimacode/aima-python>

Find substitution, unification, and resolution functions. Explain how they work.

### **Post-Reflection**

On a scale of 1-5, with 5 being most confident, how well do you think you could execute these learning objectives:

- 11.2 Translate English sentences into first order logic \_\_\_\_\_
- 12.3 Demonstrate how to make inferences in FOL using resolution \_\_\_\_\_
- 12.4 Explain what a definite clause is and why it is useful. \_\_\_\_\_
